

Ancient Herbals Tea Testing Chat

Depending on where a taste bud resides on the tongue, it will sense specific tastes. The tongue zone divided into the four aromatic zone: bitter zone - the base or back of the tongue; sweet zone - the tip of the tongue; sour zone - the center of the tongue's edges and salty is pretty much all over the place.

Scientific research suggests that genes affect taste buds. This means that what you like (and don't like) to eat may be genetically predetermined. One thing is clear: the more taste buds a person has, the more sensitive they are to taste. People are divided into three taste bud groups:

Flavor is technically a taste-olfactory sensation. In simpler words, when we eat food, we are actually simultaneously tasting and smelling the food. That is why when you have a stuffy nose, taste is virtually eliminated.
